

THE NEW FREEDOM ON DOUBLE AND RAISED FLOORS

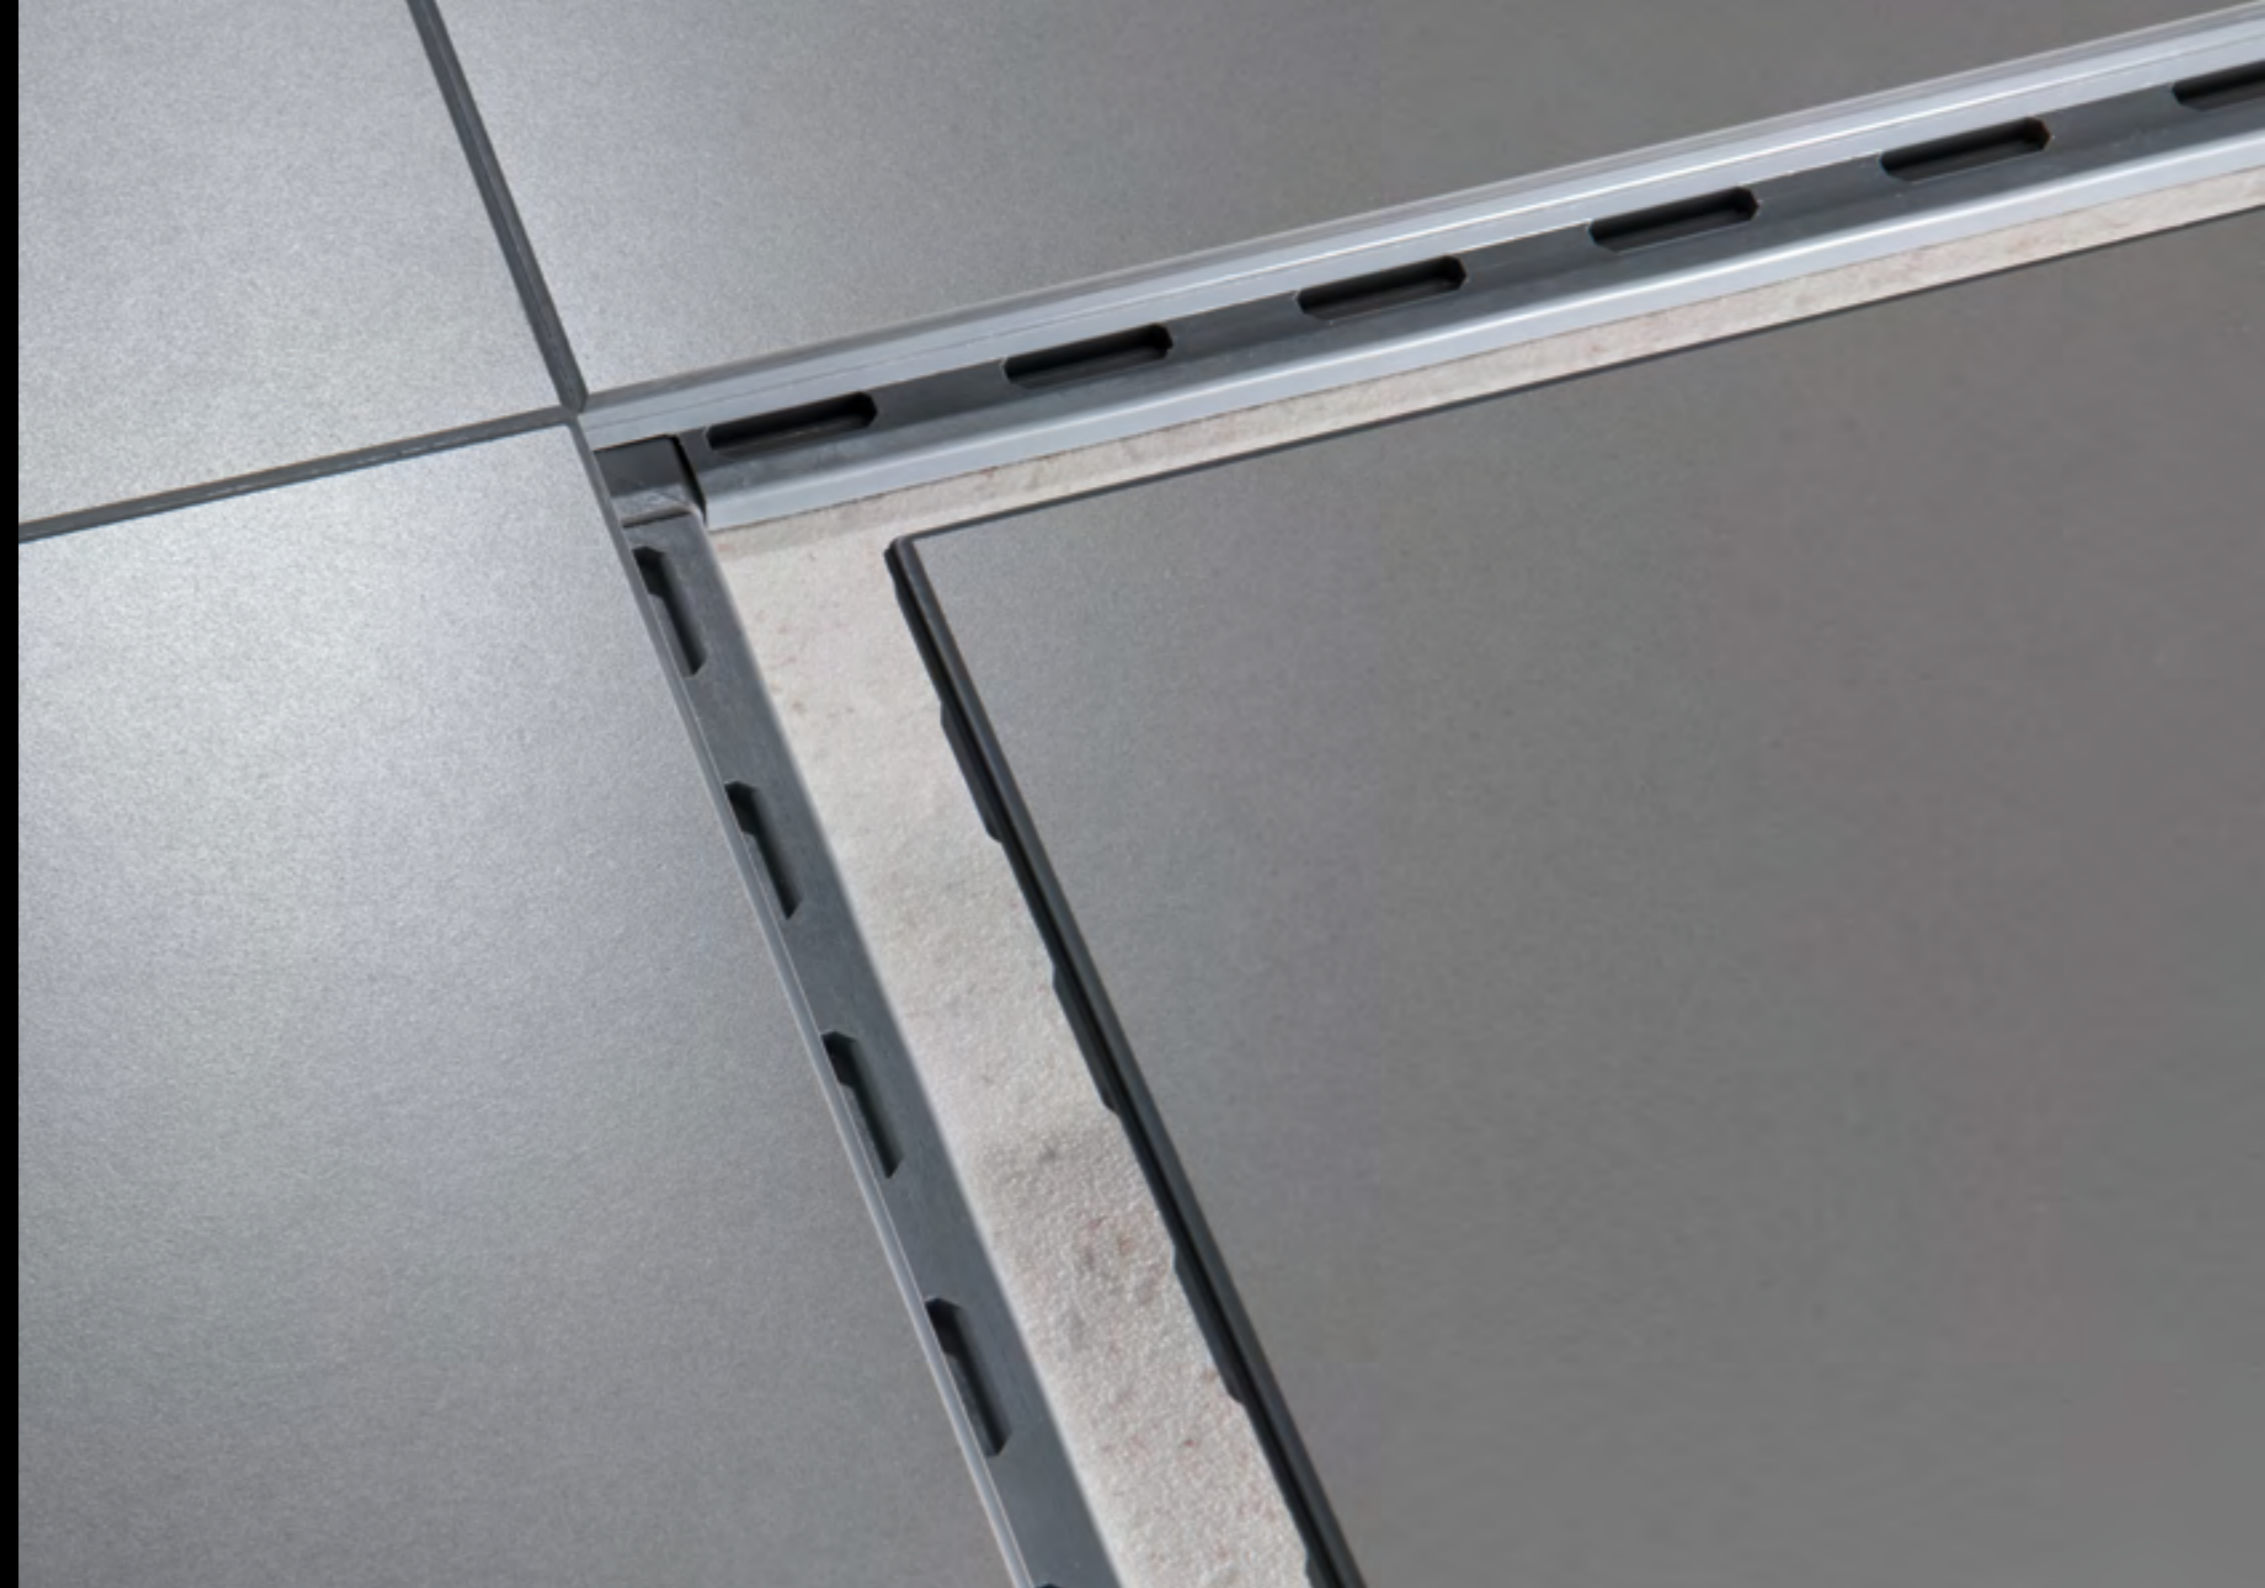

INNOVATIONS FORM THE FOUNDATION

The ArsRatio flooring system has revolutionized the concept of tile and flooring installation without sacrificing on any of the established quality criteria. The recipient of numerous awards, this flooring system consists of individual prefabricated elements (system tiles) which, thanks to the patented interlocking system, lock together quickly, cleanly and securely – with no need for adhesives or grout. Requiring practically no tools, an absolutely smooth floor with precisely uniform joints installs within seconds.

Saving the best for last: the ArsRatio flooring system is completely interchangeable – after installation, individual elements can be opened up, switched or replaced as desired.

These innovations are the foundation for your success and were distinguished by the "German Design Council" with the 2017 German Brand Award in the "Building & Elements" category.

OPTIMUM PRICE/PERFORMANCE RATIO FOR DOUBLE AND RAISED FLOORS

The ArsRatio AR18 and AR23 flooring systems were developed specifically for the requirements of modern double and raised floors. The combination of minimum installation effort and precisely uniform joints ensures an optimum price/performance ratio coupled with maximum aesthetics.

Thanks to the innovative interlocking system, the individual floor elements – consisting of system tiles including polyurethane joints – not only install fast on finished double/raised floors, but also can be opened up again with ease. The flooring solution thus features a unique flexibility which makes it possible to change the floor layout retrospectively and allows for trouble-free access to HVACR systems.

AR18: MODULAR FLOORING FOR GOOD BUSINESS

AR18 system flooring with porcelain stoneware surface and polyurethane formation is the all-round solution for application areas such as sales floors, offices, practices, showrooms and exhibition areas with normal loads*. AR18 is available in the format 600 x 600 mm with an installation height of just 18 mm.

COLOURS

Standard series colours available. Please enquire for individual colours and colour combinations.

AR23: THE STABLE SYSTEM SOLUTION FOR HEAVY LOADS

AR23 system flooring has a surface made of porcelain stoneware with a polyurethane formation and reliably withstands heavier loads*. Ideal for sales floors, restaurants, hotels, fair installations and public buildings and even suitable for traffic with (electric) lifting dollies and forklifts. AR23 is available in the format 600 x 600 mm and features an element thickness of a solid 23 mm.

COLOURS

Standard series colours available. Please enquire for individual colours and colour combinations.

YOUR ADVANTAGES AT A GLANCE

FAST: The patented interlocking system can be installed within seconds – even during business operations – and is immediately ready for loads.

FLEXIBLE: Individual floor elements can be opened up, switched or replaced as required in next to no time – making it possible to change the floor layout or access HVACR systems without any trouble.

COST-EFFICIENT: The ideal price/performance ratio guarantees you tailored quality flooring at attractive terms.

CLEAN: The dry-laying system involves installation which is “floating”, with no adhesives or retrospective grouting – so there is no dust, dirt, noise or interminable drying time.

AESTHETIC: Elegant surface materials combined with precision joints ensure an especially attractive floor. The tile element system comes with a prefabricated polyurethane joint.

STRONG: The modular flooring system can handle heavy loads immediately after installation and AR23 is even suitable for traffic with (electric) lifting dollies and forklifts with full palettes*.

SUSTAINABLE: Listed with the German Sustainable Building Council (DGNB e.V.), environmentally-friendly in terms of manufacture and removal, and recyclable.
